MONEY IN PECANS

The pecan has now become thoroughly established as one of the leading commercial orchard trees. They are hardy and long-lived trees. While naturally a forest tree, it responds to extra good care as other fruit trees.

Land set to pecan trees increases in value every year.

Good varieties of pecan trees grown on stock from large improved nuts make a wise investment.

In sending out this price list for the season of 1919 and 1920, am pleased to inform the trade that I have more trees for sale than any previous winter, and which my fifteen years' experience in growing trees leads me to believe are as good trees as can be grown. They are budded on stock grown from large improved nuts, which have a great advantage over trees grown on stocks from small pecans. Every one who plants pecan trees ought to know this. I find that trees budded on stock grown
from large improved nuts grow faster and develop into large strong trees more quickly.

I give my pecan nurseries my personal attention. I select buds from good bearing wood, so that my trees will give my customers the very best service possible. I have cut out such varieties as do not seem to be well adapted to the South.

I make a specialty of growing and budding pecans, being engaged in this industry for the past fifteen years.

CURTIS. Size medium, shell thin, kernel plump, flavor rich and of excellent quality. It is very productive, being well adapted to the South; has more good qualities than any variety I have tried.

PRESIDENT. Bright yellowish brown with a few broken stripes near apex; size 45 to 50 to the lb.; shell thin, cracking easily; very attractive, fine flavor, very prolific.

VAN DEMAN. One of the finest nuts yet introduced; always brings good prices.

SCHLEY. Large size, about 1 7/8 by 7/8 inch; oblong, light reddish brown, specked at base; shell thin, brittle, cracking quality excellent; kernel plump, smooth, full; flavor rich and sweet. A good grower and said to be a heavy bearer.

STUART. An old and well tried variety. I believe it has been recommended by the government.

TECHE. Size medium to large; color grayish brown with a few dark streaks; base and apex round; shell thin, cracking easily; quality good; very prolific; comes into bearing very early.
SUCCESS. Tree a good grower, nut large, shell thin, and large, plump kernel. This is one of the later introduced varieties and is proving valuable.

KENNEDY. This variety came from the same lot of seed as that of the famous Curtis variety. Size larger than the Curtis. Tree strong and healthy grower, early and abundant bearer; quality the best.

RANDALL. Nut medium to large, grayish brown, kernel plump, full, comes out of shell whole; has nutty flavor; quality good; heaviest bearer I know of.

DELMAS. Size large ovate; color dark gray, marked with dark specks and streaks; shell medium thick, cracking quality good; kernel bright yellow; flavor sweet; quality good; very early bearer.

I also handle peach and citrus and all kinds of fruit trees adapted to this climate.

My long experience in growing fruit trees in this State enables me to select for my customers such as will give them the best service.

To Any One Interested in Pecan Culture: I have set out 120 acres on my land and have assisted in 40 acres or more for other parties, and I can say that the different varieties that Mr. Stokes has, together with his nurseries, are among the finest I have ever seen. I don't think any one can go wrong by getting his trees from him.

Yours respectfully, HENRY BERELINE.
TERMS OF BUSINESS

Shipping season from November to March first.
I substitute when not otherwise instructed.
Terms cash.
If an error should occur and same be report-
ed to me promptly, I will correct same or re-
fund purchase price.
When trees are delivered to transportation
company in good order my responsibility
ceases.

Trees baled or boxed carefully.
Come and see my nurseries and grove, show-
ing what can be done when good trees are
planted.

Instructions how to plant and care for trees
go with each order.

I have bought 600 budded pecan trees from E. E.
Stokes. I find him to be a good pecan nurseryman.
He plants large improved nuts to grow stock on
which he buds his trees. I find that pecan trees
grown on stock from large improved nuts grow
faster and make better trees than those grown on
stock from small nuts. To see his pecan orchards
loaded with nuts and the splendid growth made on
his nursery trees is to realize that he is up-to-date
on pecan culture.

P. H. BAKER, Turpentine Operator.

Mr. E. E. Stokes, Campville, Fla.
Dear Sir: The pecan trees I bought of you and
planted in February, 1916, 7 to 9 feet high, all lived
except one, and made a very fine growth each year
since planting—a few of them bloomed last spring.
Those, 150, I bought of you and planted last Jan-
uary all lived, except one, and have also made a
fine growth this year. I find all your trees excep-
tionally fine, well rooted, easy to live and grow
rapidly after planting, and take pleasure in recom-
mending them to all my friends and neighbors who
contemplate planting pecan trees, and can guaran-
tee them a square deal when they buy of you.

Yours truly, N. D. WAINWRIGHT.
